# Data flow diagram

Data Flow Diagram (DFD) for a cafeteria menu display in ServiceNow would visually represent how data flows through the system, showing how information about the menu is accessed, processed, and displayed. The diagram would include external entities like users (employees, guests), processes (menu retrieval, display logic), and data stores (menu database).

## Use

**User:** Represents anyone accessing the cafeteria menu (employees, guests, etc.).
**Menu Database:** A data store containing menu items, prices, descriptions, and potentially images.
